

Hi! My name is Mateo Arturo Geffroy, I'm from La Plata, Buenos Aires, Argentina.

I'm studying Systems Engineering at the National Technological University of La Plata. I have already completed the requirements for the intermediate Systems Analyst degree, including the seminar where I developed and approved a project called *Arsens*, which is available in my portfolio. Right now, I'm finishing the remaining courses between this year and next to officially obtain the degree.

I'm a full-stack software developer with a strong focus on web programming, but I'm always open to learning new languages and frameworks. During university, I worked on several projects with real clients, and as a freelancer, I completed two independent projects: a SaaS system and a project called *Scrached Horses*. Both of them are available in my portfolio.

I have experience with Python and JavaScript, and frameworks such as React, Next.js, Django, Flask, and FastAPI.

I develop functional technological solutions with a modern design. I'm also used to working in teams, handling version control with tools like Git, and keeping proper documentation.

I'm very interested in applying my knowledge in a professional environment, and I would love the opportunity to join your development team.

Thank you very much to the hiring team for your time
